

project brief

TYPE OF FACILITY:
Performing Arts Center

Carnival Center for the Performing Arts

■ Miami, Florida

The Carnival Center for the Performing Arts was designed and built in an effort to revitalize the city's core. The center, which opened in October of 2006, consists of two buildings which feature a 2,400-seat opera house, a 2,200-seat concert hall and a 200-seat black-box theater.

By working hand in hand with Victaulic Sales and Construction Piping Services pre-bid, the local union contractor was able to estimate, bid and secure one of the largest commercial jobs in South Florida. Victaulic provided all of the services rendered with the drawing package as well as a better piping system that is easier to maintain.

The center utilized Victaulic pipe joining systems on the chilled, condenser and hot water lines up to 24 inches (610 mm). By choosing to use Victaulic systems and services, the contractor completed the project on time and within budget.

SPECIFICATIONS:

SERVICES:	PIPE MATERIALS:	PIPE SIZE RANGE:
Chilled Water	Carbon Steel	2 – 24"/60.3 – 610 mm
Condenser Water	Carbon Steel	2 – 24"/60.3 – 610 mm
