

project brief

TYPE OF FACILITY:

Luxury Hotel and Casino

Borgata

■ Atlantic City, New Jersey, United States

Devoted to luxury, imagination and personal indulgence, Borgata raised the stakes for casinos in Atlantic City and, in the process, challenged its construction partners to beat the odds.

Victaulic Construction Piping Services (CPS) drawing packages were utilized for the chilled and heating water systems which were originally specified welded with a Victaulic grooved option. These drawing packages ensured that the systems were drawn to the dimensions of Victaulic products including couplings, fittings, valves and accessories, as well as Tour and Andersson circuit balancing valves. And, with a delivery window of only 90 minutes per week, it was imperative that Victaulic piping coordinators arranged organized and timely delivery of all Victaulic products, reducing on-site material handling and allowing installation crews to meet aggressive construction deadlines.

SPECIFICATIONS:

SERVICES:	PIPE MATERIALS:	PIPE SIZE RANGE:
Chilled Water	Grooved Carbon Steel	2 ½ – 14" / 73 – 355 mm
Heating Water	Grooved Carbon Steel	2 ½ – 10" / 73 – 273 mm
Plumbing Systems	Grooved Carbon Steel	2 ½ – 10" / 73 – 273 mm
Fire Protection	Grooved Carbon Steel	2 ½ – 6" / 73 – 168 mm
